

## Course Information

	<i>Name:</i>	Jake Wildstrom
	<i>E-mail address:</i>	djwild01@louisville.edu
<b>Instructor:</b>	<i>Phone number:</i>	(502)852-5845 (x5845)
	<i>Office:</i>	Natural Sciences Building 113
	<i>Office hours:</i>	<i>Primary:</i> W15:30–16:30, R13:00–14:00
		<i>Secondary:</i> M15:30–16:30, T14:00–15:00, and by appointment

<http://aleph.math.louisville.edu/teaching/2014SP-206>

**Lecture:** MWF 11:00–12:15 in Natural Sciences Building 110

**Prerequisites:** MATH 205 or ENGR 101.

**Textbook:** *Calculus, Early Transcendentals* by James Stewart, seventh edition.

**Learning Outcomes:** Students who complete this course will be expected to be able to use all standard methods for calculating integrals, apply integrals to calculation of areas, volumes, and other physical quantities, comprehend differential equations and polar coordinates, and interpret infinite sequences and series.

**General Education Content:** MATH 206 is a general education course and may not be taken pass/fail. This course satisfies the university general education requirement in the mathematics content area. Students who satisfy this requirement will demonstrate that they are able to do all of the following: represent mathematical information symbolically, visually, and numerically; use arithmetic and geometric models to solve problems; interpret mathematical models such as formulas, graphs, and tables; estimate and check answers to mathematical problems, determining reasonableness and correctness of solutions.

**Responsibilities:** You are responsible for attending class on a regular basis and maintaining comprehension of the scheduled class objectives. You are expected to be participants in class, attend assessments, and to revise returned assessments when appropriate. Assignments are provided for your benefit and you are expected to work on them as necessary.

**Special needs:** Any scheduled absence during a quiz or examination, or any other special needs, *must* be brought to my attention during the first week of class. Unscheduled absences will be handled on a case-by-case basis, with exceptions generally made only for documented emergencies.

**Calculators:** Calculators are unnecessary for any in-class work, and may not be used on quizzes or examinations. They are also unnecessary for most homework problems, but may be used at your discretion. For any calculation more complicated than simple arithmetic, you are expected to show your work.

**Honesty:** There are many resources available to help you succeed in this class, including consultation during office hours and cooperation with other students. It is important, however, that all papers handed in be the result of your individual comprehension of the course material. Duplication of others' work is both a disservice to your own education and a serious violation of the university's academic honesty policy.

**Grades:** Homework is ungraded and is provided for study purposes. Quizzes will be based on the homework problems, and will account for 30% of your grade. The three midterm examinations will each be worth 15%, and the comprehensive final examination is worth 25%. A 90% overall guarantees a grade of A–, 80% guarantees a B–, and 70% guarantees a C–. All in-class assessments except for the final exam may be revised to recover up to a quarter of the lost credit (see next page of syllabus for details).

**Changes:** The syllabus is subject to change. Changes will be announced in class and updated online.

## Revision Instructions

Assessments (exams and quizzes) except for the final exam can be revised for up to one-quarter credit. These revisions must be completed and turned in *prior to the next assessment date* for credit, unless otherwise stated in class. Papers will ordinarily be returned on the next class day after the quiz or exam. Unclaimed papers can be picked up during office hours. The first appearance of each incorrect element of the work will be circled; if you have questions or wish to have a discussion to clarify your own understanding, please come to office hours.

Revisions should consist of the original assessment, unaltered, with an attached document including, for each question, both an analysis of what was done incorrectly and the correct solution from the last correct point in the original solution. Revisions should be legible and easy to follow; explanations/analysis of errors should be in complete sentences. Below are several examples of common types of errors and how an explanation for each might proceed.

**Sign errors or arithmetic errors:** These are easily explained, and are usually a matter simply of stating the error, e.g.

- “4 + 7 was calculated to be 13, when it is actually 11.”
- “I thought the derivative of the cosine function was the sine function, but it’s actually the opposite of the sine function.”

**Unjustifiable manipulations:** The specific false “law” being applied should be given, as well as, if possible, a better law to use to achieve your goal, as below:

- “It isn’t true that  $(a + b)^2 = a^2 + b^2$ . A good way to multiply out  $(a + b)^2$  is as  $a^2 + 2ab + b^2$ .”
- “In general the derivative of a product isn’t the product of the individual derivatives. You have to use the product rule instead.”
- “It’s not true that  $\sqrt{x + y} = \sqrt{x} + \sqrt{y}$ , and there’s no easy way to simplify this expression.”

**Misinterpreting word problems:** When a mistake is made converting a description to mathematical language, indicate both your misconception and the correct interpretation:

- “I interpreted a 13% reduction in radiation as a multiplication by  $-13$ . However, if 13% of the radiation fades in a year, that actually corresponds to a multiplication by  $100\% - 13\% = 0.87$ .”
- “The problem asked for us to maximize the area of a rectangle of dimensions  $x \times y$ ; I maximized  $2x + 2y$ , which is the perimeter, instead of the area  $xy$ .”

**Not knowing what to do:** Analyze the situation you got stuck at, and indicate both the next course of action and why it is chosen.

- “ $\frac{d}{dx} \sin(x^2)$  is the derivative of a composition of the two simpler functions  $\sin u$  and  $x^2$ , so we can find it with the chain rule.”
- “Since this is a related rates problem with a right triangle, the distances in the problem will be related by the Pythagorean theorem.”

These details are *not necessary* when you take the assessment originally, but are expected as part of the learning process when submitting revisions; the goal is not to harp on your errors but to provide you with the tools to understand and overcome them. Understanding the specific mistakes is a key part of that process, which is why such a specific correction process is mandated.

## Course Schedule

This schedule is tentative and subject to change.

Week	Monday	Wednesday	Friday
1	January 6 Section 5.5	January 8 Section 6.1	January 10 Section 6.2
2	January 13 Section 6.3	January 15 Section 6.5	January 17 Section 7.1 <i>Quiz #1</i>
3	January 20 <i>MLK Holiday</i>	January 22 Section 7.1	January 24 Section 7.2
4	January 27 Section 7.2	January 29 Section 7.3	January 31 Section 7.4 <i>Quiz #2</i>
5	February 3 Section 7.4	February 5 Section 7.5	February 7 <i>Exam #1</i>
6	February 10 Section 7.7	February 12 Section 7.8	February 14 Section 8.1 <i>Quiz #3</i>
7	February 17 Section 8.2	February 19 Section 8.2	February 21 Section 8.3
8	February 24 Section 8.5	February 26 Section 9.1	February 28 Section 9.2 <i>Quiz #4</i>
9	March 3 Section 9.3	March 5 Section 9.4	March 7 <i>Exam #2</i>
10	March 10–16 <i>Spring break</i>		
11	March 17 Section 9.5	March 19 Section 9.6	March 21 Section 10.1 <i>Quiz #5</i>
12	March 24 Section 10.2	March 26 Section 10.3	March 28 Section 10.4
13	March 31 Sections 11.1, 11.2	April 2 Section 11.3	April 4 Section 11.4 <i>Quiz #6</i>
14	April 7 Section 11.5	April 9 Section 11.6	April 11 <i>Exam #3</i>
15	April 14 Section 11.8	April 16 Section 11.9	April 18 Section 11.10 <i>Quiz #7</i>
16	April 21 Review	April 23–25 <i>No class</i>	
17	Monday, April 28 <i>Final exam, 11:30–14:00</i>		

## Problem Sets through Exam #1

Boldface problems are particularly advanced and will test problem-solving skills beyond the core of the course material.

- Complete by *January 10* in preparation for *Quiz #1*:
  - *Section 5.5*: 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 31, 33, 35, **53**, 55, 57, 59.
  - *Section 6.1*: 1, 3, 5, 7, 9, 11, 13, 15, 17, **23**, 29.
- Complete by *January 17* in preparation for *Quiz #1*:
  - *Section 6.2*: 1, 3, 5, 7, 9, 11, 13, 19, 21, 23, 25, 27, 29.
  - *Section 6.3*: 3, 5, 7, 9, 11, 13, 15, 17, 19.
  - *Section 6.5*: 1, 3, 5, 7, 15, 17.
- Complete by *January 24* in preparation for *Quiz #2*:
  - *Section 7.1*: 1, 3, 5, 7, **9**, 11, 13, **15**, 17, **23**, 27, 29, 37.
- Complete by *January 31* in preparation for *Quiz #2*:
  - *Section 7.2*: 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, **33**.
  - *Section 7.3*: 1, 3, 5, 7, 9, 11, 13, 15, 17, 21, **23**, **25**, **27**, 29.
- Complete by *February 7* in preparation for *Quiz #3*:
  - *Section 7.4*: 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 21.
  - *Section 7.5*: 1, 3, 5, 7, 9, 11, 13, 15, 17, 19, 23, 37.
